EDUCATION

Minor Degree — Data Science & Machine Learning, IIT Mandi – CCE | Jul 2024 – Dec 2025 | CGPA 8.0/10 | [Marksheet](#)

- Key modules: Machine Learning, Deep Learning, Data Science Methods, Statistical Analysis

B.E. — Artificial Intelligence & Machine Learning, Bangalore College of Engineering & Technology (VTU) | 2021 – 2025 | CGPA 7.55/10

- Relevant coursework: Data Structures, DBMS, Python Programming, Statistical Methods, Neural Networks

PROFESSIONAL SUMMARY

Data and analytics graduate with a B.E. in Artificial Intelligence & Machine Learning (VTU) and a completed Minor Degree in Data Science & ML from IIT Mandi (CCE, CGPA 8.0/10). Ranked #79 out of 1,773 in HackerRank Orchestra (June 2026), building a multi-modal evidence review pipeline with Gemini API. Build end-to-end data projects in Python: analyzed 149K retail transactions (\$698.8K revenue), fine-tuned an image classifier to 99.65% test accuracy, and built a reusable healthcare data-cleaning pipeline. IBM-trained Data Quality Analyst (NSDC, 6 months). Seeking an entry-level Data Analyst role in Bangalore.

TECHNICAL SKILLS

Data Analysis: Python (NumPy, Pandas), SQL (MySQL - joins, aggregation, subqueries), Data Cleaning, Exploratory Data Analysis (EDA), Statistics fundamentals (descriptive stats, correlation, hypothesis testing basics)

Visualization & Reporting: Matplotlib, Seaborn, Streamlit dashboards, Excel (pivot tables, VLOOKUP, charts), Power BI (basics)

Machine Learning: scikit-learn (linear regression, decision trees, random forest, model evaluation), PyTorch (CNN transfer learning, ResNet50)

Tools: Git/GitHub, Jupyter Notebook, Google Colab, VS Code

EXPERIENCE

Data Analyst Intern — DataX Labs (Remote) | 06/2026 – present

- Selected for a structured, project-based data analytics internship; completing daily tasks across the analytics workflow (data cleaning, EDA, SQL, visualization), each delivered as a documented GitHub repository

Technical Support Executive — iEnergizer IT Services Pvt. Ltd. (Razorpay process), Bangalore | 12/2025 – 02/2026

- Handled daily technical support tickets for Razorpay, a leading digital payments platform, diagnosing and resolving customer issues through systematic troubleshooting and documentation
- Worked with ticketing systems and structured client communication in a fast-paced IT service workflow

Self-directed Data Analytics upskilling | 02/2026 – present — SQL, Excel, statistics and Power BI through project-based learning; all work public on GitHub

INTERNSHIPS

NSDC — AI-Data Quality Analyst (IBM Trained) | 09/2024 – 03/2025 | [Certificate](#)

- Completed 6 months of IBM-led training in data quality assessment, cleaning workflows, and validation; built an NLP-based healthcare data cleaning pipeline as the capstone deliverable

CSIR Fourth Paradigm Institute (CSIR-4PI) | 01/2024 – 03/2024 | [Certificate](#)

- Contributed to an image-generation research project under CSIR-4PI mentorship; gained exposure to research workflows and experiment documentation

AICTE – IBM SkillsBuild | 06/2023 – 07/2023 | [Certificate](#)

- 6-week internship on emerging AI technologies; built a regression-based mental fitness analysis as the final project

PROJECTS

Multi-Modal Evidence Review Pipeline — Python, Gemini API, prompt engineering | [GitHub repo](#)

- HackerRank Orchestra hackathon, June 2026 — Rank #79 / 1,773
- Built a two-call pipeline (one multimodal vision, one text-only decision) that adjudicates damage claims from submitted photos; ran a controlled four-config experiment and added multi-key failover with round-robin rotation

Coffee Shop Sales Analysis — Python, Pandas, SQL, Matplotlib | [GitHub repo](#)

- Analyzed 149K transactions (\$698.8K revenue) across 3 store locations; cleaned and validated raw data with Pandas and SQL
- Produced 4 actionable findings on peak hours, product mix, and store performance, presented in a summary dashboard

Netflix Titles Data Cleaning — Python, Pandas, Jupyter | [GitHub repo](#)

- Cleaned the 8,807-row Netflix catalogue: caught 3 records with the runtime stored in the wrong column, set per-column missing-value rules, fixed data types, and split the mixed duration field into separate value and unit columns; cut missing values from 4,307 to 30 with no rows dropped, all in a reproducible notebook

Superstore Sales Dashboard — Python, Pandas, Plotly | [GitHub repo](#)

- Turned 9,994 sales records into one business story - found that discounts above 20% erase profit (~\$135K lost, nearly half of total) - and delivered it as an interactive hosted dashboard plus a storyboard report with clear recommendations

Fruit Image Classifier (CNNs) — *Python, PyTorch, Streamlit* | [GitHub repo](#)

- Fine-tuned ResNet50 to 99.65% test accuracy / 0.9967 macro F1 across 10 classes
- Diagnosed and fixed background shortcut learning across 3 model iterations; verified on real phone photos (4/4 correct); built a Streamlit GUI for live predictions

Healthcare Dataset Cleaning Pipeline — *Python, Pandas, difflib* | [GitHub repo](#)

- Built a Python pipeline that standardizes inconsistent medical records: fuzzy text matching, deduplication, validation rules; documented before/after data quality with reproducible scripts

Mental Fitness Tracker — *Python, scikit-learn, Seaborn* | [GitHub repo](#)

- Merged and cleaned 2 OWID mental health datasets (6,750 rows, 150+ countries); compared 4 regression models with full EDA, Random Forest reached R^2 0.993 (test)

CLI Expense Tracker — *Python, csv, datetime* | [GitHub repo](#)

- Command-line expense tracker with CSV persistence, date validation, category totals, monthly filtering, and delete; auto-saves after every write, zero external dependencies
